

Breakout kits for terminating loose tube cable, available with 24 or 36 inch legs.

DESCRIPTION

Berk-Tek breakout kits are designed to speed up the field termination of loose tube cable, providing an easy to install fiber protection solution. Each 250-micron fiber feeds into its own color-coded 900-micron elastomer tube. After inserting all the fibers, the 900-micron tube holder and cable subunit can be quickly secured in the snap together transition box. Once the kit installation is complete, the fibers and the subunit transition are protected, providing worry free handling and installation of connectors.

Features

- Compact design
- Quick and easy to install
- Suitable for 2.4mm and 3.0mm subunits
- Excellent fiber routing capabilities
- Detailed instructions provided with each kit
- Heat gun not required
